

Sprint 2 Overview:

We started the sprint by discussing the overview of the project and giving everyone clear tasks.

Sprint goal:

The goal for sprint 2 was to create a solid start for the front end, so work on the backend could begin. Our vision for the backend consisted of: a functional database in MariaDB, Maven project structure and Jacoco for code coverage testing. We also wanted to create unit tests for the backend and frontend if possible. The overall goal summarized: Create a solid foundation for the whole project.

Completed tasks:

Created the database structure
Created the User Interface design in Figma
Created the first version of the frontend
Created and organized the Maven project folder structure
Added JaCoCo to the project
Created unit tests

What went well:

Tasks were clearly divided between team members and everyone completed their main assigned tasks, and that's why now basic structure of the application is ready for further development.

Communication was also really good.

Time spent table on sprint 2:

Team Number Name	Assigned Tasks	Time Spent (hrs)	In-class tasks
Roope	Unit tests	4	Submitted
Aleksi	Project Folder Structure (Maven + JaCoCo)	5	Submitted
Elias	Database	4	Submitted
Kirill	User Interface Figma + Frontend	4.5	Submitted
